

## **MessageSolution Celebrates 19th Anniversary of Providing Efficient Enterprise Compliance eDiscovery and Office365 Storage Offloading Solutions for Companies' Annual Renewals Savings up to 60%**

*Launching a new enterprise solution **Open Archive for Office 365**, MessageSolution provides low latency and fast-search with an open architecture archiving storage solution*

Silicon Valley, CA (July 24, 2023) MessageSolution Technologies, an industry technology leader in enterprise compliance archiving and eDiscovery, launches its newest cloud service on the award-winning platform for Office 365 global admins and celebrates the company's 19th anniversary. The new MessageSolution Open Archive for Office365 solution delivers up to 60% in savings for SMEs and enterprises' Office365 annual renewals.

MessageSolution Open Archive for O365 archiving supports mixed storage environments and consolidates email repositories for faster review of subject requests on email and file. MessageSolution enables global enterprise customers to classify, report, and delete privacy data upon request to meet compliance requirements of GDPR and CCPA, etc.

"MessageSolution Open Archive's architecture design is cost-effective and saves up to over 60% for companies' Office annual renewals. We effectively offload large volumes of email and file data from Azure Cloud Network with a seamless user Outlook and Windows Explore access", says Josh Liang, Vice President and Board of Director of MessageSolution, Inc.

"MessageSolution Open Archive's workflow is both intuitive and administrator/user friendly. With industry-leading scalability, our global customers and partners regard MessageSolution Technologies as the most economical, yet the best-in-class solution for both SMEs and international enterprises. Our platform can be both on-premise in companies' data centers, or hosted by MessageSolution Cloud." States Josh Liang.

For companies that are subscribing to Office365 but with applications and features that are not being used or low-usage apps in E3 and E5 enterprise plans, MessageSolution can be the answer for companies to repurpose their plans to the lower-cost subscriptions. Microsoft only allows admins to switch up plans, but not flexibly switch down to a lower-cost plan. MessageSolution provides the flexibility and convenience for companies to mix and match Exchange Online email plans to meet their Office 365 subscription needs.

With MessageSolution Open Archive for Office 365, companies are also able to offload large amounts of data to MessageSolution Platform to prevent a surprisingly large renewal invoice from Microsoft for upgrading the email plans as well as for the potential additional storage charges, along with companies' data volume growing in Microsoft Azure Storage. MessageSolution Platform provides the scalable data repository for admin to switch email plans in Exchange Online (e.g. switch from E5 to E1 Plan), with end users being able to access

historical email data as usual from their Outlook account and data retrieved from their legacy E5 mailbox. MessageSolution offloads the E5 data into the MessageSolution Platform and flexibly restores it into the new E1 mailbox through Outlook.
