MessageSolution™
Customer Driven Trusted Partner

How is MessageSolution Different?

MessageSolution offers both On-Premise and Software as a Service (SaaS) archiving solutions. MessageSolution Enterprise Email Archive, Enterprise File Archive and Enterprise SharePoint Archive's organized back-end comprehensive and intuitive interface make archiving easy while superior technology saves storage space and optimizes system performance.

Superior Technology Gives Faster Results

Next-Generation Technology

MessageSolution Enterprise Email Archive (EEA) is the first 64-bit application in the market, which fully takes advantage of all the resources 64-bit environment provides. MessageSolution's archiving software indexes structured, semi-structured, and unstructured information, facilitating high-speed search and retrieval of emails, attachments and files. Comprehensive indexing of message contents, attachments and metadata during initial archiving results in much faster and more accurate searching. Enterprise Email and File Archives' built-in search engine allows users to search using a variety of key word, key phrase and metadata parameters to pinpoint results in sub-seconds. MessageSolution's search engine technology does not require any third party software or database, saves IT administrators the cost, time and headache of maintaining and licensing parallel SQL software. In the first quarter of 2009, MessageSolution became the first enterprise class archiving vendor in the market able to simultaneously archive for all compatible email servers and deliver a true 64-bit application that runs on a 64-bit OS machine.

Lower Storage and Hardware Requirements

MessageSolution's archiving solutions reduce archive storage space requirements by an average of 75%, while some other vendors may inflate storage volumes to multiple times the original size. Enterprise File Archive keeps historical files from clogging up file servers, and Enterprise Email Archive keeps email servers running smoothly. Breakthrough storage management technology facilitates easy backup and disaster recovery, while high in-process compression rates, and Single Instance Storage de-duplication technology effectively keep archive size under control. To further reduce hardware requirements, MessageSolution has unified the email, file share, and SharePoint archives to run on the same archive server. Email, file share, and SharePoint/Quickr archiving solutions support all storage devices, from inexpensive disk storage to EMC Centera, along with hierarchical storage management, and have minimal system requirements.

Easier Deployment, Configuration, and Use

Unlike solutions that take hours to install the components and then configure the database, MessageSolution's products do not require IT administrators to configure databases and other third party software. The base installation session can be performed via online conference in a matter of hours, a vast improvement over the typical 3-day onsite engineering consultant required by many vendors. The archive is completely intuitive to administrators and end-users, especially since MessageSolution email, file system, and SharePoint archives can all be accessed from one convenient web-based interface.

Quickly Adapting to a Customer's Environment

Email Servers

MessageSolution Enterprise Email Archive, with breakthrough archiving technologies, was the first to support all of the top-selling enterprise class email servers, including Microsoft Exchange, IBM Domino, and Novell GroupWise. Enterprise Email Archive's flexible architecture was designed with open standard technology and programmed with standard protocol, making it compatible with all email servers, including Exchange Server 5.5, 2000, 2003, 2007, & 2010, Domino 6.5 and above, GroupWise 7 and above, Postfix, Postpath, Zimbra, Kerio, Scalix, Imail, Qmail, Sendmail, MDaemon, Sun Server, and more. Enterprise Email Archive is an ideal choice for any organization that may encounter future messaging infrastructure changes such as server upgrades, merger and acquisition plans, and cross-server migration. MessageSolution archives business instant messages for Microsoft Exchange OCS and IBM Domino Sametime, and supports any IM vendors to archive instant messages.

The Industry's Highest Scalability

MessageSolution leads the archiving industry in enterprise class archive scalability with an implementation of more than 20,000+ users on a single archiving server, while competitive "leading" archiving products in the market are archiving for an average of 3,000-5,000 users on a single archiving server.

Quickly Adapting To A Customer's Messaging Environment

Operating Systems

MessageSolution protects clients' long-term investments in their IT infrastructure with adaptive archiving solutions. Although most vendors in the market support only one or two platforms, MessageSolution's email and file archiving products natively support Windows, Linux, and Solaris operating systems. Enterprise Email Archive was the first native Linux archiving solution in the market, while Enterprise File Archive provides a Windows desktop search application for convenient archive searching.

Centralized Policy Management:

- Centralize emails, files and SharePoint files for streamlined records management.
- Automate data retention and management processes for optimal productivity, while remaining completely transparent to end-users.
- Easily configure retention, storage repository, and user archive access settings by creating and leveraging policies on individual users or across entire departments.
- Import and easily manage PST/NSF/GroupWise files with the Migration Utility.
- Comprehensive e-discovery features, auto-classification, and intuitive analysis features allow corporate legal counsel and HR managers to quickly process through vast historical archived data in any litigation event or audit.
- The entire contents of the archive can be converted back to their original formats using our Archive Export Utility.

Affordable SaaS, On-Premise, and Hybrid Enterprise Content Archiving Solutions

At regional or global level, MessageSolution and its partners' highly secured SaaS archiving solutions offer low entry cost and low monthly fee archiving for SMEs, while the enterprise class on-premise and hybrid archiving solutions provide the IT administrators one-stop-shop archiving options to choose from.

Multiple Archives for Creating an Optimal Archive Infrastructure

MessageSolution's Enterprise Email Archive comes in multiple editions, all of which come with a convenient web-based interface. Compliance Express edition delivers robust compliance, e-discovery and storage management features at an affordable price. Professional Edition has all the features of Compliance Express, but also offers fluid integration with Outlook and Lotus Notes, off line archiving, and BlackBerry mobile archive access. Enterprise Suite edition offers all the features of Professional Edition, plus Outlook Web Access and Domino Web Access support. Enterprise File Archive can be united with the email archive and provides convenient Windows desktop search integration. MessageSolution also provides Software as a Service options.

Price-Competitive Products, Professional Service

MessageSolution provides the most competitively priced archiving products in the market and is supported by a highly efficient worldwide operation. MessageSolution offers deployment assistance via telephone or email, with no mandatory on-site installation services, saving clients approximately $8,500 immediately. Enterprise Email Archive's Suite Edition is typically 25-40% less than competitors' archiving solutions. MessageSolution Express Edition usually costs approximately 50% less than competitors' archiving solutions, yet it does not compromise product features, quality, or support. This makes MessageSolution the most viable solution for most organizations' IT resources and budget.
