

MessageSolution Releases Enterprise Migration System, the First Multi-Functional Migration/Archiving System in the Market, at IBM's Lotusphere® 2010

Orlando, Florida, January 18, 2010, and Milpitas, California -- MessageSolution, Inc., the global technology leader in email, file, and SharePoint/Quickr archiving solutions for electronic discovery, litigation support, compliance, storage management, and email server migrations, today announces the release of MessageSolution Enterprise Migration System, the first enterprise level multi-functional, cross-server migration software system in the market to simultaneously deliver mail server migration, legacy email archiving, stubbing, and ongoing email archiving of new email from post-migrated mail servers, a high-performance all-in-one migration/archiving system.

Although the email server migration market has long recognized the need for cross-platform messaging migrations for archived email environments, no other company before MessageSolution has accomplished the ultimate goal of performing migration and archiving simultaneously, being able to migrate from Domino to Exchange, GroupWise to Exchange, or Exchange to Domino, Exchange to Scalix, etc.

“We’re proud of that MessageSolution is the first in the industry to integrate a multi-functional migration system,” said MessageSolution Chief Technology Officer Jeff Liang. “MessageSolution Enterprise Migration System delivers high performance bi-directional mail server migration, archiving, stubbing when necessary, along with simultaneous archiving of new emails -- all of these tasks in one process.”

MessageSolution Enterprise Migration System will help companies that plan to switch email server environments to achieve a smooth yet timely transition.

MessageSolution’s integrated high performance migration/archiving system streamlines

the customary multi-stage migration and archiving processes that ultimately cost more time and software licensing fees from multiple vendors.

“The idea is to have one product that addresses multiple requirements and resolves multiple issues that traditionally would need two or three products to do so,” Liang explained. “Our engineers’ profound knowledge of Domino, Exchange, GroupWise, and all Linux servers are fully reflected in this sophisticated and high performance migration system, which is a great investment for today's businesses because it significantly reduces the costs and time that would be required with multiple vendors' products.”

As the first software vendor in the market to deliver an on-site archiving solution, Enterprise Email Archive, that supports all three top-selling email servers - Exchange, Domino, GroupWise, along with all Linux-based mail servers - MessageSolution's engineering development team leveraged its profound expertise and understanding of these mail server environments to revolutionize migration technology by delivering the first multi-functional migration/archiving system in the market.

As an IBM Advanced Business Partner, MessageSolution will be exhibiting among IBM's select Business Partners at the Lotusphere Product Showcase under the Government Solution category and in the main exhibition area at booth 719 during Lotusphere 2010, from January 18 – 21, in Orlando, Florida.

About MessageSolution, Inc.

MessageSolution is the global technology leader in email, file, and SharePoint archiving software for electronic discovery, compliance, and content storage management. MessageSolution enables organizations to mitigate risk, reduce costs and storage requirements, optimize server performance, and comply with industry and federal regulations. Based in Silicon Valley, California, MessageSolution maintains operations in North America, Europe, and Mainland China, along with distribution channels in Europe, Africa, Australia, and Asia Pacific.

MessageSolution Enterprise Email Archive, Enterprise File Archive, and Enterprise SharePoint Archive are on-site and Software as a Service archiving applications serving organizations across all industries, including finance, health care, education, manufacturing, government agencies and non-profit organizations worldwide. MessageSolution software frees IT administrators from daily maintenance and

MessageSolution is actively working with partners around the world to expand its worldwide business presence. Please visit our web site for more information on the Global Partner Network Program.

What Differentiates MessageSolution Products

Customers continually emphasize MessageSolution products' excellent overall performance, support of all major email servers, and ease of use. MessageSolution provides sub-second data retrieval, an intuitive interface, and ease of deployment and maintenance. MessageSolution's intelligent back-end design significantly reduces installation requirements, backup time, and the need for technical support.

MessageSolution Enterprise Email Archive™ deftly manages petabytes of data daily, a powerful enterprise archiving solution. Electronic discovery and litigation support are empowered by the archive's built-in search engine, which searches through millions of emails within seconds across global locations and data centers. Users can access their archive through their email client, browser, or BlackBerry.

In the first quarter of 2009, MessageSolution became the first archiving vendor in the market to deliver a true 64-bit application that runs on a 64-bit OS machine.

MessageSolution delivers the industry's highest enterprise-level scalability and holds the industry record of archiving 15,000 users on one single MessageSolution archive server. Competitive vendors archive on average 3,000-5,000 users on a single archive server, much less than MessageSolution archiving system's scalability and flexibility. A high in-process compression rate combined with single instance message and attachment archiving slows archive storage growth.

Enterprise Email Archive™ further reduces organizations' storage costs by using only 25-30% of the original mail server storage space for live content archiving. MessageSolution's products support all Latin-based languages, as well as all character-based languages, such as Japanese and Chinese.
