

MessageSolution Releases Enterprise Migration System for GroupWise, Advancing its Technology Leading Position for Enterprise Information Archiving and Migration

Salt Lake City, Utah, March 23, 2010, and Silicon Valley, California -- MessageSolution, Inc., the global technology leader in email, file systems, and SharePoint/Quickr archiving for electronic discovery, litigation support, compliance, storage management, and email server migrations, today announces the release of MessageSolution Enterprise Migration System for GroupWise, the first enterprise class multi-functional, cross-server migration software system in the market to simultaneously deliver mail server migration, legacy email archiving, stubbing and ongoing new mail archiving, a high-performance streamlined migration/archiving software system for Novell's GroupWise server platform.

Although the email server migration market has long recognized the need for cross-platform messaging migrations for archived email environments, no other company before MessageSolution has accomplished the ultimate goal of performing migration and archiving simultaneously, being able to migrate from GroupWise to Exchange bi-directional, Domino to Exchange, or Exchange to GroupWise, Exchange to Scalix, etc. MessageSolution Enterprise Migration System also performs SharePoint and Microsoft's Business Online Suite (BPOS) migrations from multiple source systems. As the global technology leader in Enterprise Information Archiving (EIA), MessageSolution is the first on-premise and SaaS archiving provider in the market to archive and stub for all top-ranked email server platforms, including Exchange, Domino, GroupWise, file systems and SharePoint, delivering compliance archiving for all Unix/Linux-based email servers, and file servers for NTFS/NFS/NSS/Netware.

“We’re proud of MessageSolution being the first in the industry to integrate a multi-functional migration system,” said MessageSolution Chief Technology Officer Jeff Liang. “MessageSolution Enterprise Migration System delivers high performance bi-directional mail server migration, archiving and stubbing, along with simultaneous archiving of new emails -- all of these tasks in one streamlined process.”

MessageSolution Enterprise Migration System helps companies that plan to switch email server environments to achieve a smooth yet timely transition. MessageSolution’s integrated high performance migration/archiving system streamlines the customary multi-stage migration and archiving processes that ultimately cost more time and software licensing fees with multiple stages or from multiple vendors.

“The idea is to have one product that addresses multiple requirements and resolves multiple issues that traditionally would need two or three products to do so,” Liang explained. “Our engineers’ profound knowledge of Domino, Exchange, GroupWise, and all Linux servers are fully reflected in this sophisticated and high performance migration system, which is a great investment for today's businesses because it significantly reduces the costs and time for a mail migration and archiving project that would be required through multiple stages or by multiple vendors' products.”

As the first software vendor in the market to deliver an on-premise enterprise class archiving solution that archives all three top-selling email servers - Exchange, Domino, GroupWise, along with all Linux-based mail servers, MessageSolution Enterprise Migration System gives organizations more mail server options for migration based on their email, IT and business requirements. MessageSolution provides more migration project planning preferences by enabling companies to archive before mail server migration for time-sensitive compliance and litigation deadlines, or for server storage pressing issues while providing a continuous and smooth server migration without affecting on-going archiving and email server operations.

As a Novell Technology Partner, MessageSolution will be exhibiting among Novell's selected Business Partners at the BrainShare Expo, and in the mail exhibition area at booth # 331, at Brainshare 2010 from March 22 – 25, in Salt Lake City, Utah.

About MessageSolution, Inc.

MessageSolution is the global technology leader in email, file system, and SharePoint archiving for electronic discovery, compliance, content storage management, and email server migrations. With products and services delivered both on-premise and as Software as a Service (SaaS), MessageSolution enables organizations to mitigate risk, reduce costs and storage requirements, optimize server performance, and comply with industry and federal regulations. Based in Silicon Valley, California, MessageSolution maintains operations in North America, Europe, and Mainland China, along with distribution channels in Europe, Africa, Australia, and Asia Pacific.

MessageSolution Enterprise Email Archive, Enterprise File Archive, Enterprise SharePoint Archive, and Enterprise Migration System are on-premise solutions and Software as a Service (SaaS) archiving services implemented for organizations across all industries, including finance, health care, education, manufacturing, government agencies and non-profit organizations worldwide. MessageSolution software frees IT administrators from daily maintenance and increases overall employee productivity. For more information, visit <http://www.MessageSolution.com>.

MessageSolution is actively working with partners around the world to work with global clients of all sizes. Please visit our web site for more information on the Global Partner Network Program.

What Differentiates MessageSolution Products

On-premise and SaaS customers continually emphasize MessageSolution products' excellent overall performance, support of all major email servers, and ease of use combined with a rich feature set. MessageSolution provides sub-second data retrieval, an intuitive interface, and ease of deployment and maintenance. MessageSolution's intelligent back-end design significantly reduces installation requirements, backup time, and the need for technical support.

MessageSolution Enterprise Email Archive™ deftly manages petabytes of data daily, a powerful enterprise archiving solution. Electronic discovery and litigation support are empowered by the archive's built-in search engine, which searches through millions of emails within seconds across global locations and data centers. Users can access their archive through their email client, browser, or BlackBerry.

In the first quarter of 2009, MessageSolution became the first archiving vendor in the market to deliver a true 64-bit application that runs on a 64-bit OS machine.

MessageSolution delivers the industry's highest enterprise-level scalability and holds the industry record of archiving tens of thousands of users on one single MessageSolution archive server, 5-8 times over competitions. Competitive vendors archive on average 3,000-5,000 users on a single archive server, much less than MessageSolution archiving system's scalability and flexibility. A high in-process compression rate combined with Single Instance Storage (SIS) de-duplication of message, attachment and file archiving slows archive storage growth.

MessageSolution Enterprise Archive Suite™ further reduces organizations' storage costs by using only 25-30% of the original mail server storage space for live content archiving. MessageSolution's products support all Latin-based languages, as well as all character-based languages, such as Japanese and Chinese.
