

MessageSolution Releases Enterprise eDiscovery Platform 7.0 at LegalTech 2013 West Coast Expo

MessageSolution will exhibit the next-generation enterprise eDiscovery solution as part of the newly released MessageSolution Enterprise Archive 7.0 at LegalTech 2013. The MessageSolution Enterprise eDiscovery Platform 7.0 will grant organizations enhanced clarity and granular control when undergoing litigation, regulatory inquiries and internal investigations.

Milpitas, Los Angeles, CA (May 20, 2013) – MessageSolution, an industry leader in enterprise-class information archiving, eDiscovery and migration announces the release of MessageSolution Enterprise eDiscovery Platform 7.0, the latest release in the MessageSolution product portfolio was designed to address all facets of the legal discovery lifecycle. MessageSolution will exhibit at LegalTech 2013 from May 21-22 in Los Angeles CA.

As the first stop of the 7.0 release tour, MessageSolution will be showcasing the latest, comprehensive eDiscovery suite at LegalTech 2013 West Coast Expo. Designed for legal departments to work in tandem with the IT team, MessageSolution 7.0 eDiscovery Platform offers a well thought-out solution to streamline of the processes of data collection and identification through a multi-tiered review, forensic discovery, and producing ESI for multiple, simultaneous cases. The solution is offered for both on-premise enterprise deployment and off-site cloud eDiscovery service implementation.

“MessageSolution delivers a one-stop legal discovery solution to help organizations quickly identify and collect ESI for timely and effective legal discoverability,” states Kevin McInerney, Global Marketing Strategist at MessageSolution. “The robust features help to reduce the duration, risk and cost of the eDiscovery process.”

While the IT Administrator controls the information archiving server and configuration, the MessageSolution Enterprise eDiscovery Platform can be independently managed by the Legal Department. After receiving a legal discovery request, legal case managers can create a new case and designate specific reviewers and custodians for each case. Legal consul can then track the review process and completion of delegated tasks in real time to address requests quickly.

With the Advanced Tagging feature, reviewers can either choose from predetermined tags or create their own for quick visual identification. The inline tagging process makes identifying and separating data efficient without compromising data integrity or chain of custody. Users can create tags for review and implement case-sensitive retention policies to categorize and work with archived data.

The MessageSolution Enterprise eDiscovery Platform also provides automated legal hold management to collect relevant data. Administrators or case managers can create legal holds to permanently or temporarily supersede set retention policies.

“The legal team creates legal hold notification emails and can automate an escalation process and reviewers produce the data in preferred PST format while leveraging automated data redaction to protect all sensitive information.” McInerney said.

In addition to the eDiscovery suite, MessageSolution will also be showcasing its flagship MessageSolution Enterprise Archiving 7.0 for Email, File Systems and SharePoint.

Newly Released MessageSolution Enterprise Archive 7.0 Features Include:

- Data-Offloading from the SharePoint server
- Distributed Storage – simultaneously save data to multiple archiving servers for high availability archiving
- Email Surveillance - create system policies to automatically monitor email for governance or identify sensitive information
- OCR Support –allow text searches within image files
- Random Sampling – automatically and periodically review a randomly generated sample of email for compliance auditing

LegalTech 2013

Held several times a years across the country, LegalTech conferences offer law firms and legal departments access to the cutting-edge technology and industry networking necessary to stay on top of ever-evolving ESI legal requirements.
