

The MessageSolution Difference

Award-Winning Archiving for Lotus Notes Domino

As a global leader in Enterprise Information Archiving, eDiscovery, Hosted Cloud Archiving and Migration services and an Advanced IBM Business Partner, MessageSolution works closely with IBM to ensure the seamless integration with all versions of Domino and Lotus Notes Client.

MessageSolution provides enterprise-class software solutions to ensure regulatory compliance, mitigate corporate risk for legal discovery, manage escalating data growth and empower internal organization.

Unified Solution with Lotus Notes Client Integration

Available for on-premise, Cloud or MSP-hosted Multi-Tenant environments, MessageSolution provides organizations with a unified solution to manage their email, Traveler/Quickr/SharePoint and file archiving and eDiscovery needs. MessageSolution provides a comprehensive information archiving experience for empowered users.

MessageSolution Architecture and Solution Flexibility

What differentiates MessageSolution from competing software vendors in the market is that the MessageSolution Platform does not require any additional database or software licensing. The solution is also one of the most scalable on the market and can archive for 25,000+ users on one server or for several hundred thousand in a clustered multi-server environment. Due to the ease of our online global deployment and support processes, Enterprise Email Archive (EEA) can be deployed almost anywhere across the globe.

Cost-Effective Storage Management Methodology

Efficiently move the data from expensive email storage to in-expensive archiving storage bricks while providing transparent user experience. There is no detectable change on the client side and yet large portions of storage space are reduced both on email server as well as the file server.

Built-in eDiscovery and Advanced Search Features

MessageSolution Enterprise Email Archiving includes standard eDiscovery features such as automated data redaction and universal legal hold. Limited Legal/Auditor access can also be configured. MessageSolution also offers an advanced eDiscovery module including features like Multiple Case Management, case approval, legal annotation and more.

Full-Text Indexing Search Engine

The MessageSolution Platform leverages full-text indexing search engine technology, full-field fast retrieve and comprehensive search engine interface, high performance search through millions of messages in seconds, and Unicode implemented solution search for all languages. Also features wildcard, proximity and fuzzy searching.

Benefits

- **Solution Flexibility:** Available as on-premise, Cloud or hosted multi-tenant solutions.
- Seamless integration through Lotus Notes plug-in, allow users to access archived emails transparently.
- Distributed through MSI installer, easy install and online deployment.
- Provide both Lotus Notes plug-in as well as Notes Template client options, easy to distribute to users.
- Offline Archive from Notes plug-in, allow users to access archived emails when they are not connected to the network.
- No 3rd party database or licensing software needed.
- Archive encrypted emails from users' mailbox.
- Maintain RTF email format.
- Federated and Combined Search allow users to locate data from multiple archive servers in different geographic locations, and through multiple vertical archives of email, file, SharePoint, and Quickr with one search.

Cloud, On-Premise and MSP-Hosted Email Archiving for Lotus Notes Domino

Multi-Repository HSM Management, Spam Filtering

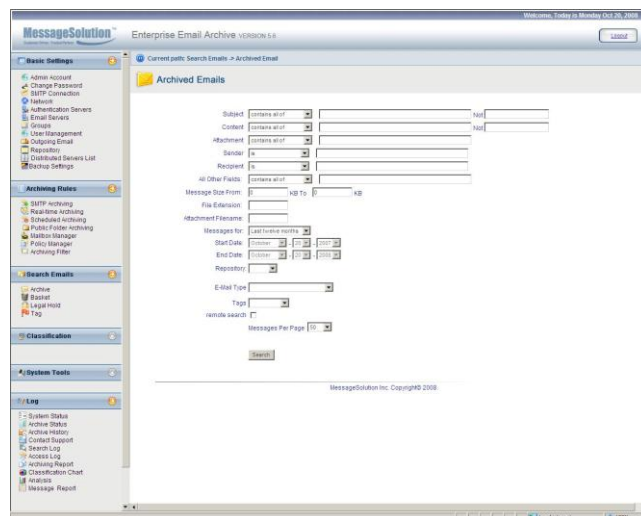

Auto notification system for storage space management, granular archiving retention policies for a complete plan of company policy setting – Universal, Department and Individual retention policies, stipulated and overridden by Litigation Hold, a complete litigation support module.

Tiered Access Permissions

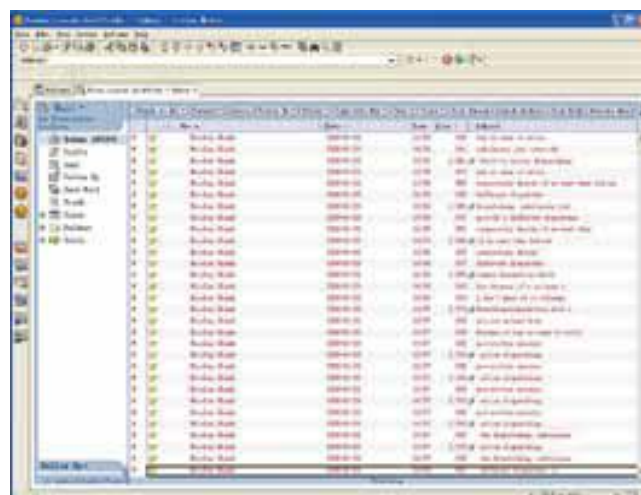

With MessageSolution Enterprise Information Archive, users can be automatically imported for the Domino Directory or manually imputed by a system administrator. Access permissions can be applied to individual users or user groups based on things like geographic location, job department, management level and more.

Cross-Server Migration System

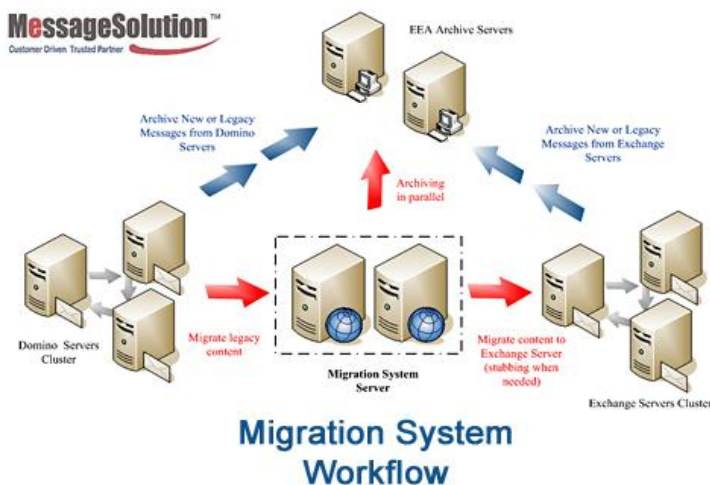

First in the market, MessageSolution delivers the cross-server migration System enabling companies to migrate between Domino, Exchange or to /from GroupWise, and performing archiving and stubbing functions during the migration process, a more than 50% saving on migration/archiving cost as well as delivering a significant saving on project time required when companies need to process server migration, archiving, and stubbing projects.

Enterprise Archive UI & Search Interface

Lotus Notes Integration

Migration System Workflow

Additional Solution Flexibility

In addition to Domino, MessageSolution also supports all the top email servers including Exchange, GroupWise, along with all Linux servers such as Postfix, Scalix, PostPath, Zimbra, Qmail, Imail, Sun Server, etc.

Archiving System Requirements:

- Pentium IV 2.0GHz (Minimum)
- Processor equivalent to your email server recommended)
- 2 - 4GB RAM
- 40GB hard disk (additional space or disk array, NAS, SAN for storage)
- Internet Explorer 6, Firefox (User)
- 1 Network Interface card
- The machine can access DNS service
- Linux 2.6, Windows 2000 or 2003, 2008, Solaris
