MessageSolution — Enterprise Archiving for email, files systems. SharePoint, & Quickr files, eDiscovery, and email platform migrations

## MessageSolution Continues its Innovation in Email Server Migration Technology, Reducing Email Cross-Platform Migration Time By 75% from GroupWise or Domino to Exchange

MessageSolution Enterprise Email Migration System delivers high speed email platform migration and saves 75% of the time needed to complete the email server migration process from GroupWise or Domino to Exchange compared to the time required by other migration vendors.

“Organizations of all sizes, including enterprises with tens of thousands of email users or SME with hundreds of email users, can benefit from MessageSolution’s high speed migration system”.

- Global Marketing Strategist *Kevin McInerney*

With the traditional migration approach, organizations performing email platform migration often face a time and resource-consuming task. MessageSolution migration technology establishes an industry milestone by completing high speed email migration processes in approximately 25% of the time required by traditional migration products.

MessageSolution’s migration and archiving multi-functional technologies can also help organizations with both email migration and email archiving multi-project requirements.

Enterprise customers that utilize traditional migration and archiving solutions frequently find it takes months to complete the first step (migration), then an equal amount of time to complete the second step (archiving), concluding with the final step (stubbying when necessary). This three-stage project can ultimately turn into a year-long project, imposing at least two sets of heavy software licensing and engineering service costs. MessageSolution Enterprise Email Cross-Platform Migration System is able to deliver email server migration, email archiving, indexing and stubbying in an all-in-one process, saving project time and significantly reducing cost.
