

FOR IMMEDIATE RELEASE

MessageSolution Multi-Tenant Cloud Archiving and eDiscovery Platform Featured at MSP World and Cloud Computing Expo 2011

As the global technology leader, MessageSolution offers high-performance enterprise information archiving & eDiscovery on both Cloud and On-Premise platforms. It allows managed service providers and hosting firms to deliver a cost-effective cloud archiving and eDiscovery solution to SME and enterprise customers to meet the requirements of regulatory compliance, eDiscovery, and email server storage reduction

Austin, Texas (September 13, 2011), Milpitas, CA: MessageSolution, the global technology leader in enterprise information archiving and eDiscovery for managed service providers (MSP), will be showcasing its award-winning Enterprise Email, File System, SharePoint Archive and its new Archive Data Replication feature at the MSP World and Cloud Computing Expo 2011 in Austin, Texas. Compatible with Microsoft Multi-Tenant Hosted Exchange, Domino, GroupWise, Scalix, Zimbra and all Linux-based email servers, MessageSolution Multi-Tenant Archiving Platform allows MSP to build a centralized archiving platform on a cost-effective, single hardware configuration to archive for multiple companies with separated individual archives and administration roles.

"Our proficiency in providing multiple archives for hundreds of SME organizations on a single archiving system puts us ahead of the pack in offering a multi-tenant archiving and eDiscovery solution in MSP's data center environment," said Kevin McInerney, MessageSolution Global Strategist. "With our groundbreaking scalability, we are able to offer the MSP partners the means to archive thousands of users from hundreds of different companies on a single archiving system or millions of users with a clustered archiving platform."

Multiple school districts, for example, have successfully deployed MessageSolution Multi-Tenant Archiving Platform with a single archiving system to offer dozens of school districts with their own separated archives. Each school district has its own administrative role and its own archive to meet the compliance and eDiscovery requirements.

Taking advantage of MessageSolution's top industry scalability records, MSP partners are able to archive tens of thousands users on a single server which can minimize hardware costs up to 80% when compared to a traditional single-tenant solution. By efficiently leveraging MSP's existing service-hosting capacity and datacenter infrastructure, MessageSolution provides SME and organizations around the world with a cost-effective yet feature-rich archiving and eDiscovery platform to generate additional revenue while improving client retention.

Public and Private Cloud: In addition to providing the archiving solution in a public open cloud, MessageSolution Enterprise Archive & eDiscovery Cloud Services offer organizations a private cloud environment which includes extended modules. These provide an all-in-one archiving and eDiscovery solution for email, SharePoint, documents and files that are available for organizations of all sizes.

MessageSolution Enterprise Archiving & eDiscovery Services are hosted in multiple secured data center locations or in Amazon's EC2 global cloud network. Data is encrypted as it leaves the enterprise customer's corporate networks. It is securely stored with Advanced Encryption Standard (AES) and RSA secure encryption algorithms in the archive with high availability and

disaster recovery.

“Both Cloud services and on-premise enterprise solutions offer distinct advantages of their own,” Kevin Mcinerney continued, “Fortunately, MessageSolution is able to offer both options to SME as well as large enterprise clients.”

MessageSolution Archive Data Replication: Released at HostingCon 2011, MessageSolution’s new Archive Data Replication is a Copy-on-Write continuous data protection technology that automatically duplicates each archived email to a remote server in a DR site. This provides immediate access to the replicated data for discovery and retrieval, meeting the challenges of rigorous legal discovery and compliance requirements in the event of the primary archiving system or data center being down.

MessageSolution will be exhibiting at the MSP World and Cloud Computing Expo 2011 on September 13-15 at the Austin Convention Center # 1706.

About MessageSolution, Inc.

Founded in 2004, MessageSolution is headquartered in Milpitas, California with operations in North America, Europe, Africa, Asia Pacific region and China. Independent and innovative, MessageSolution, Inc. offers award winning cross-platform migration, integrated enterprise archiving for compliance, electronic discovery, and storage management for both on-premise and Cloud environments.
