MessageSolution™
Enterprise Archiving, eDiscovery, Migration

Enterprise Email Cross-Platform Migration System
Migrate & Archive GroupWise or Domino to Exchange 2007/2010
Compliance, eDiscovery and Archiving Solutions

MessageSolution Enterprise Email Cross-Platform Migration for GroupWise and Domino Servers to Microsoft Exchange is designed for IT department in government, education and enterprise environment that are seeking the robust features and performance in the Microsoft Exchange Server with long-term worldwide support infrastructure.

Select the Project Option that Meets Your Needs:

Archiving First, Server Cross-Platform Migration in the Future

Quickly archive regulatory compliance requirements and internal record management with MessageSolution's Archiving with eDiscovery solution for GroupWise, Domino and Exchange. GroupWise and Domino users may then elect to Migrate to Exchange using MessageSolution's award winning Cross-Platform process.

Archiving & Stubbing Reduce Mail Server Storage Size before Migration

Company can archive from the existing GroupWise or Domino server and stub the email data and attachments to reduce the GroupWise server storage up to 80%. It is fully transparent to users experienced with GroupWise, Lotus Notes and Exchange integrated functions and virtually eliminating the Client learning curve.

Email Cross-Platform Migration First, then Archive the Email Data

Is archiving and eDiscovery not a near term priority? Companies can first conduct a stand-alone email migration process with MessageSolution Enterprise Email Cross-Platform Migration System, and then select to archive the historical and new data from the new Exchange server platform at a later time.

Stand-alone Email Server Cross-Platform Migration

MessageSolution's Cross-Platform Migration System can also be implemented as a stand-alone solution, enabling GroupWise and Domino servers to move to the Microsoft Exchange Server. It preserves all emails, calendar items, address book, and contacts in the Exchange environment.

Intra-Server Migration with MessageSolution

MessageSolution's Comprehensive Cross-Platform Migration solution provides an elegant component to its suite of products that includes Archiving and eDiscovery for GroupWise, Domino and Exchange.

Migration Features:

- eMail, Calendar, Address Book and Contacts
- Future & Recurring Appointments
- Shared Folders
- Distribution Lists
- Proxy Rights
- Nicknames & Alliances
- Native Archives
- Uses Windows-Based .net Programming
- Simultaneous or Post Migration Archiving Options
- Applies SOAP or ObjectAPI for eMail Retrieval
- Uses EWS or MAPI

System Requirements

- Pentium IV 2GHZ or above
- 2-4GB RAM
- 40GB hard disk
- 1 Network Interface card
- The machine can connect to the Email Servers and Directory Servers
- Windows XP, 2003 Server
- .Net Framework 3.5
- GroupWise Email Client 7.x or 8.x

Technology

MessageSolution's Enterprise Cross-Platform Migration System for GroupWise and Domino to Microsoft Exchange is a Windows platform based application built with .net programming language. It utilizes server level technology to deliver robust migration performance.
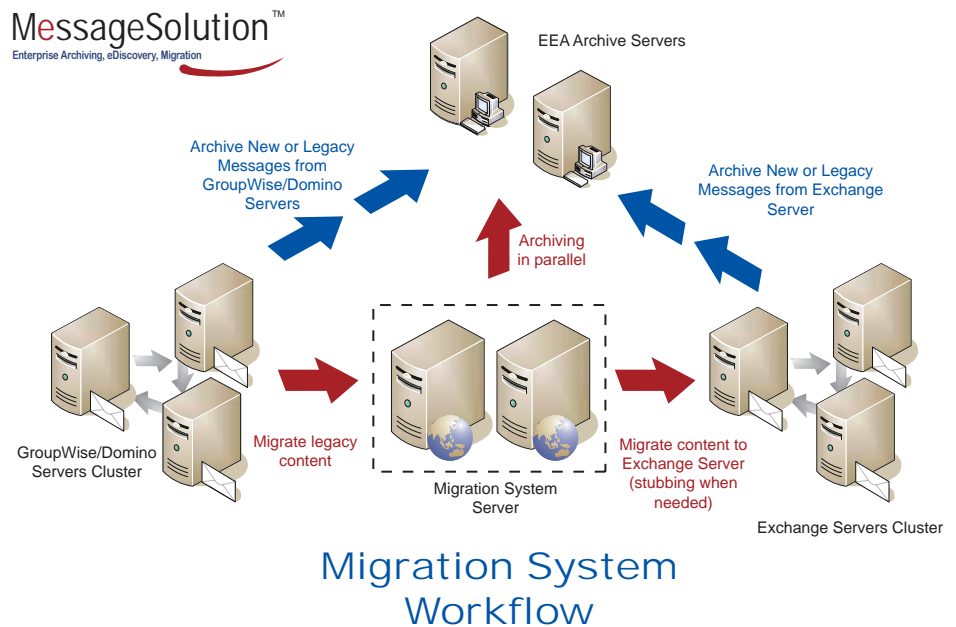

After applying SOAP or ObjectAPI to retrieve emails and other items from a user's GroupWise or Domino Server mailbox, MessageSolution creates the same items in its corresponding Exchange Server mailbox. It uses EWS (Exchange Web Services) or MAPI to create the items in Exchange 2007 and Exchange 2010. MessageSolution's Migration process is multi-threaded and can concurrently migrate multiple mailboxes at the same time to deliver a fast migration process.

Prior to initiating the mailbox migration, MessageSolution Migration System auto-populates user accounts in Active Directory. It can also auto create mailboxes on Exchange Server and invokes commands on Windows Power Shell to create each mailbox. MessageSolution Migration System matches mailboxes between GroupWise Server and Exchange Server by SMTP address.

Superior Technology Gives Faster Results

Migration Process Project Planning

- **Archiving before Server Migration**
- **Archiving & Stubbing before Sever Migration**
- **Migration & Archiving (Stubbing Optional) All-in-one Process**
- **Archiving after Migration Completed**
